1.0 INTRODUCTION

McCabe Environmental Services, L.L.C. (McCabe) was retained by Bayonne Board of Education (Client) to conduct lead in drinking water testing at Horace Mann Community School located at 25 W 38th Street, Bayonne, New Jersey 07002.

The project information is as follows:

Client Name:	Bayonne Board of Education
Contact Person:	Mr. Daniel Castles
Project Name:	Horace Mann Community School – Lead in Drinking Water
Project Location:	25 W 38th Street Bayonne, New Jersey 07002
Date(s) of Service:	September 1, 2022
McCabe Personnel:	Gary Clare, Gerard D'Alessio & Brandon Soto

2.0 SCOPE OF WORK

Drinking water testing was performed at Horace Mann Community School on September 1, 2022. The purpose of the testing was to determine if the building's plumbing was having an adverse impact on water quality, specifically with regard to lead concentrations. Samples were collected from various potential drinking water outlets located throughout the building. Testing was followed as per past reports provided by Bayonne Board of Education. Locations were also added in certain schools as per Scott Nolan's request.

3.0 PROCEDURES

After determining which outlets would be sampled, McCabe personnel collected a "first draw" sample at each location. A "first draw" is the initial water that is first to come out of the tap after a period of inactivity. Following the "first draw", a "30 second flush" sample was also collected closest to where the main service line comes into the building. All samples were collected into 250 mL sterile bottles, labeled with a sample identification, and analyzed in accordance with EPA approved methods to determine the level of lead in drinking water. Samples were analyzed by an accredited laboratory.

The U.S. Environmental Protection Agency (EPA) has established National Primary Drinking Water Regulations (NPDWR) that set mandatory water quality standards for drinking water contaminants. These are enforceable standards called "maximum contaminant levels" or "MCL", which are established to protect the public against consumption of drinking water contaminants that present a risk to human health. An MCL is the maximum allowable amount of a contaminant in drinking water which is delivered to the consumer.

The EPA has established the Lead and Copper Rule that sets standards for state and public water systems. This rule has set an MCL for lead at 15 parts per billion (ppb) for a one liter sample. However, the EPA also established the Lead in Drinking Water at Schools and Child Care Facilities in which the EPA recommends an MCL of 20 ppb for a 250 milliliter first draw sample. In order to be more stringent, for our report purposes we have compared all results to both the 15 ppb and the 20 ppb standards.

4.0 TABLE OF SAMPLE RESULTS

The following table presents all sample results in order of sample identification:

5.0 DISCUSSION AND CONCLUSION

A total of twenty-one (21) samples were collected from Horace Mann Community School located at 25th W 38th Street, Bayonne, New Jersey 07002. Two (2) samples were found to be greater than the EPA Lead and Copper Rule standard of 15 ppb but were below 20 ppb. All other samples were found to be less than the EPA standards of 20 ppb and 15 ppb.

McCabe recommends discontinued usage of the following outlets which resulted in failed results until additional samples can be collected and analyzed and a permanent solution can be recommended:

- **Bubbler by Room 204**
- **Bubbler by Room 303**

Proper signage shall be posted at the Library Office Sink identifying "Do Not Drink, Safe For Washing Hands." This sign can be found in Appendix B.

To address the water quality in the short term, McCabe recommends that it may be appropriate to inspect piping near these fixtures to determine if any corrosion is evident and whether it is possible to replace portions of the piping.

In addition, McCabe Environmental recommends annual drinking water sampling to ensure that the building's plumbing is not having an adverse impact on water quality.
